Optimal, economic building control for your customers—reliable, flexible support for you

T

The EXCEL 5000[®] direct digital control system from Honeywell lets you pass along to your customers the most sophisticated, flexible building control technology available today, yet its easy to use and install.

The EXCEL 5000 system lets your customers choose:

- How they want to control their buildings, now and in the future
- How they want to interact with their systems, and who should operate them
- The services they want with their systems

There's no better building control system available for delivering cost control and comfort to your customers, their buildings, and their tenants.

And Honeywell's specially trained, authorized distributors and contractors offer unparalleled service and support for the most reliable, flexible distribution channel in the industry.

OPTIMAL MANAGEMENT OF ENERGY COSTS

The EXCEL 5000[®] system is the building management tool your customers need to control costs and keep their occupants comfortable.

EXCEL 5000 continually optimizes energy use as it improves occupants' comfort. For

your customers, that means fewer complaints, higher occupancy rates, more lease renewals, and higher rents.

EXCEL 5000 controllers reduce operating costs and track all the information your customers need for effective building management. Their return on investment is maximized and payback is quick.

Beyond reducing your customers' operating costs, EXCEL 5000 reduces the costs involved with managing and servicing buildings and training employees.

The EXCEL 5000[®] system lets your customers know the control conditions in their buildings instantly, in keypad display or graphics.

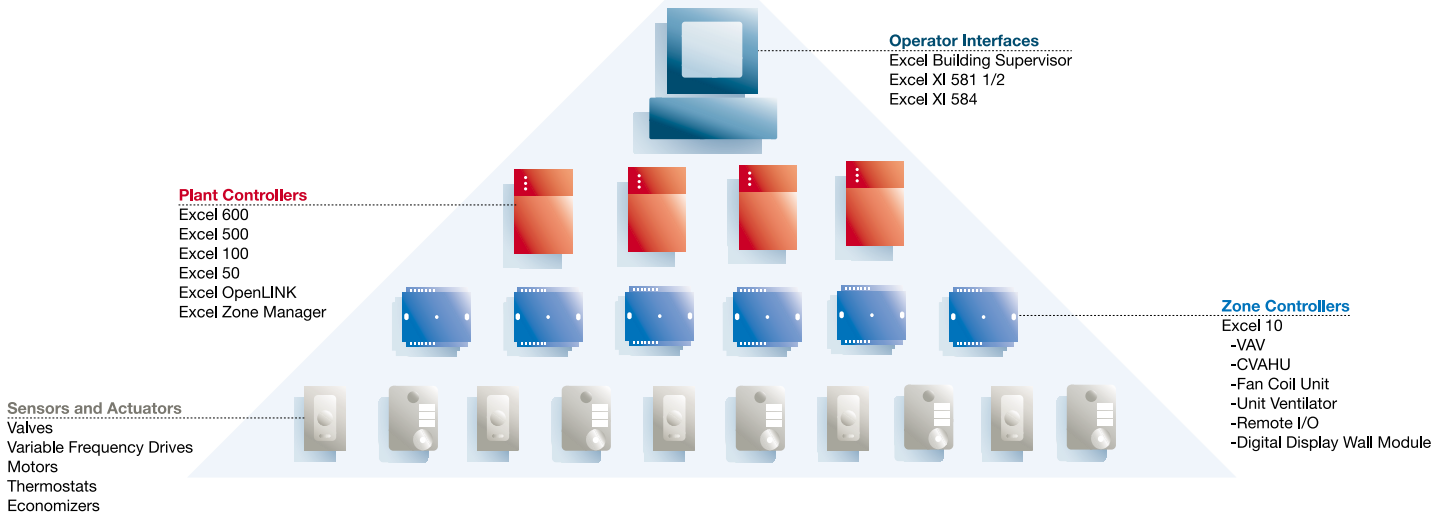

EASY TO LEARN AND OPERATE

From keypad displays to PC-based supervisors, EXCEL 5000 operator interfaces are consistently intuitive, visual, and interactive.

Customized, descriptive messages enable technical and non-technical employees alike to operate the system with a minimum of training.

Your customers can easily adjust and service the EXCEL 5000 system at their location or over the telephone. They can enter and change setpoints, override schedules,

EXCEL 5000® SYSTEM ARCHITECTURE

diagnose equipment problems, track energy use, and acknowledge alarms all from a central location. If you choose, Honeywell can provide a 24-hour, custom monitoring service through our North American Building Services Center for a dependable, fast response that frees your employees to spend their time on more productive tasks.

Windows*-based EXCEL 5000 graphics software operates simultaneously with other PC software, and puts alarms in the foreground when customers are using other Windows applications.

Remote control with the EXCEL 5000 system reduces the travel and labor costs of building service. From a PC, your customer can manage one building or several buildings nationwide.

“FUTURE PROOF” BUILDING CONTROL IS EVERY CUSTOMER’S DREAM

Give your customers whatever they need for their building and application:

- Stand-alone or networkable controllers
- Modular inputs and outputs (mounted in the controller housing or distributed)
- Dedicated zone controls

The modular EXCEL 5000® system grows as your customers’ requirements grow. Tenant changes, equipment changes, and system expansion can be handled quickly and easily without complex reprogramming.

EXCEL 5000 controllers can be part of a fully integrated building management system that can include HVAC, lighting, fire protection, security, and access control, all monitored and managed through a single interface.

The EXCEL 5000 system keeps customers and their tenants comfortable while it saves energy and streamlines their building management tasks.

RELIABLE AND SECURE

Proven Honeywell control logic delivers comfort and energy saving dependably. Control logic is distributed to every controller independently, increasing system reliability and performance.

Unauthorized system changes can be prevented by fixing setpoint values or entering a range of acceptable values. Multiple-level passwords may be added to limit system access.

Used in conjunction with the EXCEL 5000 system, Honeywell’s full line of control components—sensors, actuators, damper motors, valves—ensures high performance for long, reliable equipment life.

THE EXCEL 5000® SYSTEM

Available from authorized EXCEL 5000® distributors and contractors

Contractors who install Honeywell products are thoroughly trained in the engineering and service specific to our systems. They are supported by local, authorized Honeywell distributors chosen for their applications expertise and trained to apply that expertise to our systems.

We work with only the best distributors in the business. Our contractors and distributors are comprehensive Honeywell business associates, with full access to the local, regional, and national support and expertise of Honeywell.

Call 1-800-345-6770 ext. 905 for a contractor in your area.
